

2018 Annual Potpourri

1. Alchemy

Did any ancient (or modern) magician really turn stone, or any other material, into gold?

C: Yes, with assistance from alien extraterrestrial visitors after the technique or method was demonstrated.

At our current stage of technology, the energy required to break up any matter and re-assemble the sub-atomic particles into gold requires too much energy to make the effort worthwhile. Hence, the ETs who came to Earth and created humanity (as their mining mules), who were technologically far more advanced than we are today, elected to use humanoids to mine gold, rather than re-assembling sub-atomic particles to make gold.

C: Mining mules is not a good description, the work was more complicated than an Earth mule can do and the treatment given was far better, more involved and there were emotional connections and affection.

They did not elect as much as reach this decision because no better option was available, to extract the gold.

They did not have the ability to synthesize gold in the necessary quantities.

Question: is my understanding correct that alchemy never existed on earth?

C: Alchemy is but a human term for materialization across dimensions and changes to substances within a dimensional range. There is little difference between alchemy and chemistry but technology, understanding and scientific process. The more precise measurement ability thus application of mathematics are the key differences.

As the ability to analyze then apply have developed, the haphazard approach has been discarded, the name for it changed.

Not every alien ET civilization has the ability to synthesize all materials, and the heavier ones are far more difficult in the beginning of the process, the beginning of the development of the technique or method. The process involves steps, and subsequent ones can undo or reverse prior process, resetting the procedure to the beginning, more likely when a heavier element is attempted.

The generation of sufficient energy is not an obstacle; the maintenance of the nucleus' stability as it is grown or constructed is the challenge. Too intense a process will cause it to rupture or fracture, much the way this occurs in a nuclear explosion.

Preceding the growth of an atom's nucleus is the ability to isolate then rupture small groups of atoms. Once the nucleus reaches a certain size, generally two protons it will automatically draw electrons into orbital rotation, and plasma is required for this.

2. White Holes

The Committee mentioned that the other side of a black hole is another universe. (If I remember correctly, there are 8 other universes.) Therefore, from the view of another universe, our black hole would be a white hole on the other side, with immense emission of matters pouring out.

C: The hole is neither black nor white. Because visible light humans can detect is not emitted, it is easy to refer to one as black.

(a) Earth scientists have observed many black holes in our universe, and the nearest one is about 2,800 light years away. But our scientists have not observed any white hole in our universe, is there any in our universe?

C: They are the same thing.

(b) Is that because black holes of other universes do not come into our universe (as white holes), or the white holes in our universe are too far away from our planet to observe?

C: No, they are doors, hatches, conduits, tunnels, paths, roads or passages.

3. Prime Directive

(a) How was the 'Prime Directive' for planet earth decided and enforced? Is there a space federation of planets as an inter-galactical government?

C: The collective group of nearby civilizations made the agreement. From its inception it has included Earth, which is already a member. The remaining members will inform Earth of its place and ability to vote when there exists collective willingness to accept this.

Among the creators and members, it is followed faithfully without need for enforcement. To outside visitors, there is a two step process; explain then remove. Removal has not been necessary over the thousand centuries of mankind, because the few explanations given to the few visitors unwilling to otherwise follow the rule, were sufficiently good such that the visitors voluntarily departed and left Earth alone.

Yes, there is a regional conference. It currently extends about two hundred fifty light years, to use an Earth term, from your planet however Earth is not the precise center of it, nor is Earth the focus of scientific, emotional or developmental matters.

The diameter of approximately five hundred light years, is approximately one half of one percent of the diameter of the galaxy. As you can appreciate, it is not a large regional conference but itself is a member of such a coalition of the galaxy's quadrant.

(b) For example, leading the Jews to flee from Egypt to Canaan, or telling American astronauts to stay away from the moon, would be a definite violation of the Prime Directive. What is the mechanism when ET decides to interfere with humanity or not?

C: No, the prime directive is neither a prohibition of contact nor a ban of suggestions. The examples you mention were not commands or orders. More open and regular contact will set off a collective reaction which would undermine the purpose and objective of the contact. This is a human choice, and is one significant reason why there is not more broad contact with mankind and Earth.

4. Energy deficit due to cut-off of Oil

As foretold by The Committee (and others, eg Erik [Medhus from channelingerik.com]), in the near-future, long distance transportation and commerce will be reduced to minimal, and society will become "local" again.

Without oil making the world go round, many countries will suffer from an acute energy shortage. Survival of these oil importing countries will require new energy technology, or they will face massive famine.

C: No however there will be brief food supply interruptions. Nothing approaching famine will occur.

Will ETs teach us new energy technology when oil stops flowing around the world, is this the plan?

C: No, not extraterrestrials. Methods and knowledge have already been given to humans, among them your host of this channeling session. The technology will not be developed or deployed until the ability to generate electricity is curtailed by geophysical events.

5. ETs living on Earth

I read that colonies of ET reptilians are living amongst our midst. They have the ability to camouflage their appearance so they appear humanoid to human.

C: No but yes.

(a) Are they just here to observe (like inter-galactical anthropologists) but not to intervene in human affairs;

C: Yes, however they do not live on Earth. There is no need for this; they do not even require a hotel. They come to the surface only when they choose, which is not often.

(b) Or, do they have ulterior motives (to conquer Earth)? I thought all ET's are supposed to observe the prime directive, why are the reptilians exceptional to the prime directive?

C: There is no desire to conquer Earth, this would have occurred already. Any visitor from outside the regional conference who might violate the prime directive receives a good explanation, however this is also rare. No extraterrestrial visitors are exempted from the prime directive; the notion alien ET visitors are hidden among humans with nefarious intent arises from the excitement of the dangerous unknown.

The human fascination with werewolves, demons, goblins, witches, warlocks, vampires and monsters is naturally receptive to sinister alien extraterrestrials; it is too exciting to ignore. It is also not true.

6. Beyond the Big Bang

Our scientists believe our universe began with a singularity which exploded more than 13 billion years ago. Our universe has continued to expand, at the speed of light, since then. Essentially, our universe is a bubble that stretches more than 13 billion light years from the point of origin.

C: Essentially correct, except for the attempt to impose an Earth time template. The expansion is not limited to the speed of light humans know.

And I read that there are 8 other universes doing the same thing at this time.

C: Yes.

(a) What is outside of the boundary of our universe?

C: Another universe.

(b) Do the other universes coincide or overlap with each other? Are they so far apart, they will never run into each other, or are they co-existing in the same space, but since each is of different dimensions, so they don't collide but co-exist like different channels in the radio?

C: No overlap, however communication as in the ability to move between them, yes. This ability is not possible for physical beings. No distance exists between universes, the boundary between each is shared and common. They do not share the same space; they occupy a segment or portion or section of it.

Collision is not possible. There is no physical substance which would have an impact upon touching another from the adjacent universe. The passageways between are where movement is possible.

(c) Does each universe have a different God? Or does the same God create and dominate all different universes?

C: You are God, each of you individually, thus collectively. All souls in all 9 universes are connected in this way.

7. Beings of light and beings of dark

I believe our God and all of us are beings of light. But then there are also beings of dark, and they are not just being far away from the light.

C: No, all beings are of the light. There are no exceptions to this.

Question: Can The Committee shed some light on the nature of the dark beings? Do they dwell in other universes or are we co-existing, within our own universe, with beings of both light and dark?

There exist no dark beings, only human interpretation of the negative.

8. Natural Cure

We are very reliant on pharmaceutical medicine today. But when long distance transportation fails in the near future, that may curtail the availability of pharmaceutical medicine. Alternative medicine, such as herbal medicine, will be needed to replace much of the missing drugs. And of course, nutritional supplements will more important in health care: better not get sick if drugs are not available. My daily regime includes: daily multi-vitamins and minerals, fish oil (for heart), biotin, turmeric, MACA, glucosamine, and lutein.

(a) Are these nutritional supplements beneficial to the ailments (glaucoma and alzheimer) that I seek to address?

C: Yes, however they are better at prevention than cure.

(b) Patrick recommended moringa before, what is it good for?

C: It greatly assists the body's restoration and repair functions.

(c) Is there any other nutritional supplement that would be beneficial but currently overlooked by both the public and medical professional?

C: Yes, exercise and physical movement, which are not considered effective medical treatments or disease prevention techniques.

(d) I am particularly concerned about Alzheimer's disease, is there anything I can do to slow-down the on-set?

C: Keep your mind occupied and body well. If it is written into a person's life contract, this person has chosen that and likewise chosen to not know that. As we have explained many a time.

In such instance the eventually afflicted person will not consciously know s/he has chosen to experience this condition and will have little success using diet or lifestyle to change it.

If the change will occur, it will require an affirmative decision by the human thus her or his soul, not only at the conscious awake level but also in conference with her or his guides and guardians.

9. Nuclear weapon and other calamities

It is comforting to know that ET and other GAG will prevent any further use of nuclear weapon on planet earth. But nuclear weapon is only one way to destroy planets. An asteroid collided with one the planet in our solar system and broke that planet into small fragments, the Atlantians almost destroyed planet earth when its crystal power system exploded, and the near-collision of another asteroid with Mars took away Mars' atmosphere and killed all life on Mars.

C: Not extraterrestrials; they are not permitted to commit such interference, by their collective choice. This protection and prevention is performed by us.

Why is it acceptable to destroy planets by asteroids or explosion of crystal power system (of Atlantis), but not by nuclear weapon?

C: Intent makes the difference, the effect of lost incarnated lives magnifies the result. The crystal power system of Atlantis did not destroy Earth and was only partially responsible for the destruction of the island continent. The self-inflicted mayhem caused mass evacuation and abandonment, but not annihilation. The ending of the physical continent's presence was by meteor.
