

Corona Virus - Additional Questions

28 February 2020

1. *Did the original virus infect the humanoids within three decades of their creation before the genetic upgrade was made?*

C: Post upgrades, plural

2. *Did the meteor arrive on earth before the creation of humanoids or after?*

C: Post upgrades, plural.

3. *Did the ETs destroy all the humanoids and animals which were infected by the original virus? How many humanoids had to be eliminated?*

C: None were harmed, neither animals nor humanoid nor humans.

4. *Why couldn't the ETs create a vaccine instead?*

C: This would have severely harmed the immune system development ability. Humans are doing this to one another again today, with excessive use of antibiotics.

5. *When will the next round of corona virus infection / pandemic occur?*

C: This cannot be discussed. Your question assumes another bout will flare up, to which we repeat this cannot be discussed. Human will, decision and behavior would be compromised in order for us to provide this date or range of them.

6. *Will the economic effects resulting from the corona virus pandemic result in or contribute to the worldwide economic slowdown?*

C: Only temporarily. Humans enjoy excitement, just ask any executive of a major news or media company. This occurrence is extending the addiction or at least habit in the non-addicted.

7. *Is consumption of Vitamin C in large quantities not recommended for those not exposed to Corona Virus...for example, say, to prevent normal seasonal influenza?*

C: Ascorbic acid will acidify the metabolism to the extent the virus cannot multiply, so it expires at the natural end of its lifespan, un-replaced. If the initial introduction occurs in an organism with a sufficiently acidic metabolism, it will struggle to gain foothold, fail and no symptoms of the sickness will emerge.

8. *In general (not related to the corona infection) many people recommend "alkalizing" the body by taking foods which change the pH to alkaline. Should we indeed do so even if our bodies are naturally acidic? Is an acidic body susceptible to more diseases and inflammation than an alkaline one?*

C: Alkalinity or acidity outside the range a disease prefers generally prevents and can cure patients. Many factors are involved, not simply the potential of hydrogen.
