

# Time, Questions & Answers

23 & 24 July 2018

A reader asks a question:

*RQ: Being the Committee in a place where "time progression" or "time sequence" as on Earth does not apply, does it mean that [they] already know every and each question I would like to ask them?*

C: No. Sequences occur but are not marked, labeled or arranged according to number lines.

*RQ: Every question that I will ask, and also every question that I will not ask?*

C: We cannot suggest an answer until the question is offered.

*RQ: Could it be [that] "answering" [is] just a matter of choosing to know the subject of the question "in my mind" and then know and transfer the relative answer?*

C: Yes, because you open your mind and offer it.

*RQ: Sometimes I feel a little weird, knowing that someone knows answers to questions that I still have to create in my mind... This "no time" element is really confusing!*

C: As is confusing the application of time to everything which receives this label, because time does not exist. There are no millennia, centuries, decades, years, months, hours, minutes or seconds where there exist no days, which are the counting of each sunrise, when your human bodies awaken.

You count them. This is time. Where there is no sunrise, no sunset, no compulsory phases of starlight and darkness, there is no pace or rhythm which requires numbering. This does not mean there is no sequence, it only means there is no artificial number line humans have assigned.

The occurrence of new things is expansion. Expansion occurs across the surface of your sphere, every increasing in size, always perfectly round and symmetric. Each new thing expands it, as if a newer layer were added. As a sphere, it can be rotated, turned and moved to place any point of the surface in any direction. Which point is first? There is no prior or subsequent, in the way time requires a line made up of points, with the inter-human agreement that one direction is or "will be" the future and the other direction is or "was" the past. The sphere can be moved as you please; because it is you. You and all spheres are balls of light; look upon a star for a dull example. The light of your souls is far brighter and very colorful, by comparison. It is not as large however almost infinitely more dynamic by physical comparison, however this is not fair to the star, which is constrained to the environment which creates it, allows its existence but restrains it. Your souls has no such barriers, it is the barrier it creates for itself, temporarily. You are your own barrier, always and forever.

Imagine a human language where there is only a present tense to verbs. All movement is now. This is Heaven. If you wish a practical sample, find your favorite passage from a favorite book, and copy it, with all verbs changed to the present tense. No future or past. Then wait a few moments and re-read it.

We suggest this so strongly, we will provide an example here: many of you have heard of a well known American author, Ernest Hemingway. We ask your channel to copy here a quote from chapter four of a famous book he wrote:

This was Brett that I had felt like crying about. Then I thought of her walking up the street and stepping into the car, as I had last seen her, and of course in a little while I felt like hell again. It is awfully easy to be hard-boiled about everything in the daytime, but at night is another thing.

(Repeated, words and verbs changed to the present:)

This is Brett I feel like crying about. I think of her walking up the street and stepping into the car, as I see her, and of course I feel like hell again. I am awfully easily hard-boiled about everything in the daytime, but at night is another thing.

Can you now more easily see Heaven, by changing this human language tool?

*RQ: At this point, I wonder if the process of "creation" of something new, like for example the process of generating a new thought, could be really not a "creation" (let something come into existence, out of nowhere) but simply is the discovery of something "already" existent, something that was just "out of our awareness sphere", and our will just draw a new thing into this sphere...*

C: If the illusion of time applied everywhere, you might be correct however it is an illusion.

Knowledge, activity and movement of your soul - your true existence - are best described as expansion. Sequences of events occur as part of a matrix cube, not a line. You can go anywhere and as each point, turn, reversal, stop then start is made, the cube expands to the extent you move to a point not previously reached.

Lines can be imagined between each point, however the cube matrix is not stationary, where you move within it; you are in place and everything moves around you. This is how your extraterrestrial cousin visitors cross what are seen as massively long distances. They do not move across the distance, everything is moved relative to their position. You can do this also. You simply do not know it yet, and do not believe it.

We cannot know your position until you choose it. Your creation of a question is no different than moving from one physical place to another. The latter is the result of your thoughts, and it is about your thoughts you ask.

You are where you think yourself to be, on Earth as an incarnated human, and you enjoy the delay mechanism in the process. In reality, it is instant however you set aside the sensation of reality, in order to travel across Earth in the temporary distortion physical density requires. The true dimensions of your soul are rendered unavailable while you occupy a body. How difficult is the learning of a language for a baby and toddler? Nobody remembers. The next language not learned as a youngster, creates impressions; at first it is only recognized as a possible language, then gradually becomes understood. Ignorance is easier and commonly chosen, especially if a temporary interpretation is available. This you all know, we understand, we mention it as a reminder about why the human notion of time cannot be traveled to anticipate thoughts.

No soul can enter your thoughts unless you welcome them. Blockage of thought is extremely rare; thoughts create reality and nearly immediately. In some cases thoughts pass through a very brief manifestation where the objects created appear much as if a light's intensity is slowly turned up, the way as a human might do with a rotary dial control. By human terms, you would measure one or two seconds; the impression the passage of these segments is what is seen in Heaven as thoughts manifest the really complex things. It occurs to no soul that time exists, for a creation can be dissolved as quickly as it is made, or even faster.

No physical recording of the existence, such as writing, photographs, audio or video, are required. All existence is permanent, in the memories of the souls who participate.

Much as you can show a book to anyone who wishes to look and read, can participants in a creation display it to any soul who does not participate. The record is permanent, perfect and instantly available. Deterioration of the physical record, on Earth with humans, erases the memories because the subsequent humans did not participate and have no reference.

This is precisely how Heaven operates, however there can be no deterioration or decay. Many humans doubt the existence of Atlantis because of the absence of such physical evidence. Some

humans will be shown, when the proper time arrives for the people who wish to see the record, they will know it is authentic, what is being shown to them.

*RQ: I hope that my questions are not too convoluted, but really this subject is really difficult to describe.*

C: Your questions are logical. Convoluted is the confusion the application of time creates when attempted removed.

Consider the consumption of a substance where a tolerance is developed and the original effects are reduced, after repeated use. Abruptly stopping the consumption can create new effects.

Humans have days and fractions and multiples of them, but no examples in human life where the angle of the starlight is not changing somewhere upon Earth's surface. The most intense clouds do not block the presence of starlight. Increases in temperature, ability to see, heating and cooling of the planet surface, weather, wind and many other effects caused or affected by the starlight, are omnipresent.

It is logical to struggle with the absence of something always in effect.

To your soul, the passage of time, as a multiple or a fraction of starlight cycles, is artificial.

Thank you we do, for these questions. Be well, all of you and each one.
