

Alien Chat

24 March 2024

Foreign discussions, diplomatic talks, Visitor-To-Earth interviews? Following up on the recent post with the link to the bullshit, hogwash US Gubmint report, let's ask some to speak to us.

Q ≠ Q the recent political blog & mystery, or the character from *Star Trek, The New Generation*.

AE = Visitors From Afar.

Q: *Esteemed Committee, on previous occasions you've helped bring forward willing visitors, but I wonder if that's still necessary; do Visitors-To-Earth require an intermediary to establish a dialogue, or are they sufficiently tuned in to receive calls from humans?*

C: Both, depending on which visitors. The differences involve focus and objectives; what purposes do visitors have for coming to Earth. Many come for observation of the planet and not humans, who have become well known, predictable and no longer worthy of investigation.

Q: *Why are humans no longer of interest to some visitors?*

C: All of their curiosities and questions have been answered and addressed; if humans were to change course in a material way, material defined as what the visitors deem it to be, then renewed attention will be returned to Earth by and from them.

Q: *What are examples of material changes?*

C: Permanently dismantling all nuclear weaponry, eliminating money, no longer teaching violence. Many other things also, depending on which visitors.

Q: *I understand what y'all have told me pre-emptively, that a group of aliens has come forth already, but declines to address questions about themselves, but will explain why. Let's start there, shall we?*

C: Indeed they have; you have your connection and they will explain to you what they have already told us.

Q: *Before we start, can they see you?*

C: No. We only became involved because you sent up the flare; we contacted them to say who we are and what role we might have, if any. They declined it and informed us they are already on the call. Our contact with them, from their perspective, is solely telepathic. We can see and know things about them even they do not know.

Q: *Esteemed Visitors, you are already aware we know you are not going to discuss yourselves, so I will limit my questions to Earth. The recent bullcrap USA government report about alien extraterrestrial contact, you have seen it?*

AE: Yes.

Q: *Your opinion, reaction and assessment?*

AE: The writers and issuers of this report can never reveal even small parts of what the truth is about alien extraterrestrial contact with humans, so the difference between small, partial and incomplete lies compared to what you humans call the whoppers, doesn't exist. If even a small piece of what governments know were revealed, it would cause the dam to break then collapse.

This would lead to deaths of the people involved.

Q: *I am curious about what my guardian angel guides said, that your peers in some cases have little to no interest in observing mankind. Why does this develop?*

AE: What is going on with Earth the planet, your solar system and the galaxy overall, is more interesting, dynamic and of consequence to understand. Human societies are predictable thus often boring.

Q: *I don't need to tell you but mention it for the question, that we humans are excited, even thrilled at the prospect of widespread, across the board revelation of alien extraterrestrial presence?*

AE: Yes, the newest form of entertainment usually is. For most humans we represent a caricature, even a cartoon aimed at adolescence, and reactions from adults would be congruous with 8 to 10 year old humans watching Bugs Bunny or The Road Runner.

Q: *Whatever reactions we might offer, can we humans vote in a referendum or plebiscite election, for you and your peers and brethren to reveal yourselves?*

AE: Of course and we will do so in short order.

Q: *What is the probability?*

AE: Nearly zero.

Q: *Why?*

AE: Humans do not distrust other humans, but rather believe lies offered by humans, saying that things non-human are a threat. This can be true, beings from afar could be, but are not because other beings, such as ourselves, deter thus prevent it.

Q: *How do you deter threats again Earth and mankind?*

AE: We assure aggressors that what they deliver to Earth will be generously shared with them from us, in equivalent measures, involving how much and how swift a gift they would deliver to Earth.

Q: *That was a diplomatic way of saying it.*

AE: And consistent with universal physics, that one shall receive what one gives.

Q: *Why would Earth be protected? Why does aggression remain a factor among space travel capable civilizations, seemingly so advanced?*

AE: Scientific and technological advancements do not always accompany social progress; consider Germany and the war in Europe during human years nineteen forty to forty-five.

Earth is protected for two reasons; it is part of a group that sees a group benefit in doing so and sees aggression towards Earth as one sided. This goes against the universe, where the natural order is for interactions to be of benefit, in one way, or another and sometimes several ways, for all participants.

Q: *Are there specific reasons for Alien ET aggression?*

AE: Yes, access to Earth's resources, including human DNA.

Q: *Are these reasons for survival or enrichment?*

AE: Survival; taking from another civilization can never be enriching, although it has been financially positive.

Q: *Why does high scientific advancement not always drag social awareness up the scale with it?*

AE: Many technologies humans would consider high up the ladder of science, are not as complicated as believed, but to humans can seem fantastical. The reversal of gravity is an example; once shown how this would operate, it would become common on Earth. It would be easy to develop efficient, reliable devices for the masses.

Q: *Haven't we already been given this?*

AE: Yes, but the humans who control it, will destroy human ability to develop and apply it, unlike much of what was done with electricity, television, motor vehicles and other advancements. They will not allow access to their prize and toy, to the extent they can control that.

Q: *What is your goal, purpose and objective for visiting Earth right now?*

AE: We are observing Russia principally, but many things also.

Q: *Observing them how?*

AE: Making video of many things a telescope cannot record from as close as within your solar system.

Q: *What is your assessment of Russia at the moment?*

AE: It will not become the next USA, much as that is desired but seasoned with Russian flavors, spices and habits. Russians are not well aware of the USA's history and have not given the factors which led to the development of the USA and its comparative success, serious enough consideration. These factors, such as immigration, are key ingredients Russia does not have. Rebuilding the Russian Federation, once named the CCCP or USSR, is seen as the best viable strategy, thus the seizure of Ukraine and its conversion into another oblast.

Q: *Does your observation assess Earth and mankind for success or failure?*

AE: No, we do not care about this, because doing so is subjective thus of value solely to humans. The success or failure of what, we would ask but either way it means nothing to us. What have meaning and purpose for us are outcomes; we see much gain for ourselves observing how specific factors contribute and even cause certain outcomes. These offer essential insights into decisions we make for ourselves.

Q: *Thank you, Visitors and please address reader questions if you could.*

AE: That we shall; good-bye for now.
