

# END & BEGIN

21 December 2024

The Committee speaks extemporaneously, without my input. How extemporaneous they are, we shall never know, or know nearly immediately.

The Committee: “Speak we do, about endings and beginnings. Humans help mark these changes with time, although clocks & calendars are not necessary for it. Such devices assist.

Describe we shall what changes are, and what is the ending and what is the beginning. We refer to your human accounting procedures, in which a cycle or period is closed. The ending balance becomes the opening balance for the following cycle. This same number is likely to never be repeated in all the closing balances to follow. It is also an opening balance. Is it an ending or a beginning? Both, you shall say.

Thus human life is reflected in the counting of money, as revolving doors are always closing and opening if the door is moving. Earth is a revolving door of perpetual motion.

The human calendar is about to tick over into a new cycle; the closing balance of two thousand twenty-four shall become the opening of twenty five. How is the world closing, and what shall await the arrival of the new cycle?

The illusion of a cycle is strong but that does not change it into something other than an illusion. Life aboard your planet is a journey, a voyage, a trip. You are the permanent travellers, who shall reach many destinations but never stop going towards one.

The closings and openings, the endings and beginnings, are neither. These steps, stops and landings in the staircases of existence are simply part of the process. Existence is a circle when the current path & route are examined but taken together, all paths form a sphere. The ending and beginning can be anywhere; choose a point and that shall instantly create a spot to begin and end. Or to end and begin, if movement is in the opposite direction.

See now do you all, the benefit you extract from the illusion that your planet must rotate one way but never the other, that the sun must always rise in the east, that up means against gravity and away from the surface but down, its opposite?

Time travel is a human fascination, even more interesting because time itself is an illusion. To travel through time simply means reversing the motion which creates it, at sufficient velocity. If humans could orbit the Earth fast enough in the opposite direction of the planet's rotation, time travel would be achieved.

A more simple way is to travel to another star, technology yet a good distance into Earth's future. Your Alien Extraterrestrial cousins shall explain more, when it is appropriate.

End this year of twenty twenty four knowing that twenty twenty five shall begin with the precise, exact same things, thus nothing shall change just because humans chose to flip a page on the booklets called calendars.

Change is good when improvements await. Our suggestions are to consider this; what should be improved? You have individual and collective choices & voices; to which will you listen and what selections shall you make?

Recusal is also a choice.

Be well, one and all of you and do return soon.
