

The Fortune Cookie

12 April 2021

Q: *Esteemed Committee, why is a random message accurate?*

C: It is not or was not random.

Q: *Do random messages occur? Such as in fortune cookies?*

C: Of course, the vast majority of such message are.

Q: *How does an accurate forecast get delivered?*

C: We arrange it, in your case as a schoolchild we arranged it also.

Q: *How are you able to do this?*

C: We use the same ability humans have, we convert thought into matter. The additional benefit of no time constraint makes this not only possible but easy.

Q: *Explain that statement, converting thought into matter.*

C: Changing of densities or dimensionalities?

Q: *That seems to explain it, is density the same as dimension?*

C: No, which is why we asked, density or dimension. Density is molecular vibration; dimension is range of frequencies. What is dense or not, occurs within a dimension. Your rocks and walls seem dense but are thinner than air to us.

Q: *How do you convert thought into matter?*

C: Just as you do. You think of paper, you think of wood, sawdust, pulp, liquid, heat and so forth. As each step is considered, you then act to complete it. All of this begins with thoughts.

Q: *But those things already exist.*

C: Before your thoughts? Sometimes yes, sometimes no. You intentionally incarnate to live the perception of dense things existing without your control over creating them. This is true for many things, but not for all.

Q: *We are able to create things out of thin air?*

C: This is the physical appearance of the process, but the creation is simply the conversion of energy from one thing to another, to a different structure, latticework, matrix or system.

Q: *How is the fortune cookie created?*

C: Created and placed we say. Easily; the paper is printed, placed inside the damp cookie before baking then...

Q: *Wait, that's what humans do.*

C: Yes, as we said, we do the same thing you do, except by comparison it seems faster to you. We create the ink, paper, print the words then go to the location where humans are placing the strips of printed message papers inside the cookies and folding the damp dough before baking to harden them. We simply pause the process, by accelerating to a speed sufficiently above that the effect of pausing is the same.

Q: *You make everything look still?*

C: Yes, everyone is frozen for a brief moment. Then we place the paper in the cookie. Then we watch the cookie; when time comes to have the cookie delivered to the recipient in question, we place it precisely where it will be picked up by the waiter or waitress.

Q: *How can everything be stopped but the humans do not notice?*

C: Humans have decided that electricity and light move at 300,000 kph or 186,000 mph. This is more than 80 kilometers per second. Humans cannot see an object moving at even one kilometer per second, such as a bullet. If something is sufficiently large and distant, such as a jet aircraft travelling at 1 km/s, it becomes visible.

We exist in a realm where movement is faster than this maximum humans have determined to be the limit, which it is but of your range. We simply reach from another range —ours—and move what we like to where or in such manner we choose. The change is instantaneous.

Q: *So when a human says, "it just disappeared" it did?*

C: Often yes.

Q: *How do you print the strip of paper?*

C: We imagine paper, the written words printed upon it and it appears as if to materialize out of nothing.

Q: *How long does it seem to take? From the point where you imagine the strip of printed paper to having appear?*

C: To a human this would seem to require about four seconds, maybe three and maybe five. It depends on the soul doing it.

Q: *Can a human imagine money as in cash, and have it appear?*

C: Yes, but this is not as necessary. Humans now create most money energetically, anyway. Just as objects can be.

Q: *Are all things where GAGs are involved, created, controlled or influenced this way?*

C: Yes.

Q: *Can sinister entities also get in the way and cause harm?*

C: Not without Guardian Angel Agreement, which means the human soul, the incarnated being, gives permission to her or his guides to allow that to happen.

Q: *If we humans move so slowly that one km/s for us makes things invisible, but more than eighty times fast also remains within our dimensionality, how are beings in higher dimensions able to see us?*

C: As we fix attention upon something in a different dimension, the energy is automatically converted. This is what happens when an angel visibly appears before a human. As has happened to you when we materialized.

Q: *The human converts the higher vibration energy?*

C: No, the human steps out from behind the screen and returns to natural ability, what all humans possess, allowing the visualization of the object, the soul or any thing in another dimension.

Q: *The human ability to see into other dimensions is very limited.*

C: No, it is artificially restricted by the choice of the human. You all possess a natural ability to see anything in any dimension. You choose to this limit, voluntarily. Think of motor vehicle speed limited by

a feature written into the computer program of the device controlling the engine. The vehicle always retains the ability to reach 200 kph even if restricted to much less.

Q: Is this how alien extraterrestrials cloak or hide themselves?

C: Sometimes, in some ways but other techniques are employed. Your alien extraterrestrial cousins exist in the same and higher ranges of the same dimensions you occupy.

Q: Like the bullets we can't see?

C: An excellent example.

Q: I would like to return for another part of this discussion.

C: As often as you would like. Be well one and all until then.
