

GAGs, Aliens & Humans

26 June 2023

Representatives from all three groups grace these pages regularly, especially the first and last or third group. The second group reads this stuff but doesn't contribute unless asked. The Committee are GAGs to me, but also general advisors unrelated to Yours Truly.

Q: Esteemed Committee, do inhabitants of other planets, physical body beings, also have guardian angel guides?

C: Of course, all physical beings who incarnate or occupy a physical body inside the dimensions which create them, have guides or guardian angels.

Q: The concept and practice are not unique to humans?

C: Not at all.

Q: Y'all said "...physical body inside the dimensions which create them..." which is very interesting. How do dimensions create physical bodies?

C: Dimensions are borders, which exclude things from both sides, prevent crossings in either direction. The higher energy or vibrational frequency of the dimensions we occupy, are filtered out thus excluded from the dimensions humans or visitors to Earth embrace.

Q: Aliens occupy higher frequency dimensions?

C: Visitors to Earth originating from other planets orbiting other stars, yes. Remember, humans are also aliens on Earth but few among you are aware. Lesser numbers of humans among the aware even acknowledge this. The dissonant vibrations between some humans and many things these same dissonant humans encounter are evidence of human alien-to-Earth status.

Q: How many dimensions exist?

C: This depends on groups and subdivisions within, essentially three or fifteen. Five within each of the three main dimensionalities. The borders or breaks seem just as sharp, large, imposing or rewarding between the five, when crossing from one to the other, as seems to occur when crossing from one triangle corner to another, not just along or through the dimensions which compose the one leg of three legs of the triangle.

Q: That was a headful of information. The three main dimensions are analogous to the corners of a triangle?

C: Yes, typically an even sided or equilateral triangle, where each of the three legs is equidistant or the same length or size.

Q: Typically? Not always?

C: No, an isosceles triangle is always the frame or structure, but the third leg or side can be a different length from the two of equivalent length. Equivalence represents balance, the third differing length leg is the uniqueness of perception any one occupant or inhabitant of a dimension might choose.

Q: We always choose or select our dimensionality?

C: Yes, no exceptions.

Q: We cannot be sent beyond our will?

C: Never.

Q: *Humans have how many dimensions in our perceived existence as such?*

C: Three but the remaining two have material influence. The three are known as width, height and length or depth.

Q: *A recent news article about alien extraterrestrial visitors to Earth mentioned a human entering a crashed vessel which from the outside was about thirty feet in diameter. Inside it was as large as a domed football stadium. The human inspector observer reported feeling dizzy, nausea and disoriented for a brief period after leaving the interior of the Alien ET ship. Was this effect caused by the dimensionality?*

C: Precisely yes. It was. Dizziness and nausea were caused by the higher frequency vibrations. The ability to see the greater interior distances were a different effect of but not the cause of the physically felt symptoms.

Q: *Why did the outside appear to be thirty feet across but the inside twenty times as large?*

C: Because the interior was twenty times as large. The exterior was also thirty feet across. This apparent contradiction is the result of the dimensionality break we just mentioned.

Q: *How is this achieved by the alien extraterrestrial visitors, or does it just happen automatically when they enter Earth's environment or atmosphere?*

C: It can happen automatically but with distracting side effects, so the dissonance is proactively managed. This means the visitors actively energize the exterior surfaces of their vessel to make it match the environment entered. This is done with magnetism, which also vibrates and flows like electricity. Humans think of magnetism in terms of field strength, but the relationships of power, voltage and amperage applicable to electricity are also a part of magnetism.

Once the exterior of the vessel enters Earth's environment, it is tuned to interface with the dimension frequencies of Earth and becomes self-sustaining. No more energy source or supply are required, just as nothing in the human environment requires an artificial power supply to sustain existence. The mountain is, as are you.

Upon entry, the human observer becomes subject to the fourth dimension. It is an extension of the three any human already perceives. What is width is wider, depth is deeper and height is higher.

Depending on which planet and environment are the origin of certain Visitors to Earth, the proportions are approximately twenty to forty times larger, compared to the human perceptions of width, height and depth or inward length, thus thirty feet become six hundred. Ten metres become one to two hundred.

Q: *Where do our GAGs fit into this dimensionality game?*

C: We exist along another leg of the triangle, as does your natural soul. We exist in Heaven, which is the combination of the three main dimensions or triangle sides.

Q: *Humans, aliens and physical things are one side, our souls and the GAGs and Heaven are side 2, what then is side three?*

C: God, the collective effect of the other two, which both creates the other sides and is also created by them, part of a two way effect.

Q: *God is trigonometry class, religion is mathematics; we've been duped all along.*

C: Yes to both. You may however un-dupe at any moment, and we say to any human reading these words, you came to read this in order to know the better and the more accurate thus the higher truth about yourself and all existence. Just knowing this enhances and elevates you, and nothing more need be done.

Q: *How can GAGs and aliens see us and also into us, communicate telepathically but we cannot?*

C: Communicate telepathically humans can. Some better but all humans may and can do it. Practice will remove the rust from your mental machinery, belief it can be done starts the engine. GAGs and aliens can see what you can, think of size. Can you see a true airplane? Of course, but a good radio-controlled model one fiftieth the size can, when filmed flying with no backdrop reference but a blue sky, appear the same.

Human objects and dimensions are small but only by comparison yet can still be seen just as any of you can observe a miniature version or a larger-by-comparison object.

Q: *This is some good stuff, Committee. One last question; the recent reports about a visitor vessel in Las Vegas, Nevada USA mentioned the crashed vessel looked blurry, before it disappeared. The occupants came out, they weren't blurry but the ship was. What happened there and why?*

C: This was what could be called a scout ship but was not entirely remote controlled. All such smaller-by-Earth-dimensions vessels are remote controllable, just as many humans' jets have automatic pilot functions which may be used or turned off.

This one suffered a hiccup in its navigation and magnetic propulsion caused by operator function and chose to put down on the surface to reset its systems. It departed once this was done. The blurry image was a lower power version of its cloak. It could well have obscured itself completely but that would have caused possible harm to curious observing humans. No concern for their bodily appearance was part of the aliens' decision to inspect the vessels' exterior. Many humans have seen similar body types and drawn similar depictions, thus no change, distortion or interference would or could result.

Q: *From what star, or should I more accurately ask, from a planet orbiting which star did these visitors come?*

C: Arcturus.

Q: *Aren't they silicone body chemistry based? Cannot breathe Earth's atmosphere?*

C: They can easily breathe Earth's atmosphere but must ingest foods and nutrients which are not carbon based. The mother ship exists for this. Just as do humans; they packed a sandwich for lunch. You would not consider the meal a sandwich, it more closely resembles what human military personnel might call an MRE, but you understand.

Q: *Thank you, Esteemed Committee.*

C: Please do return one and all.
